Miguel Ángel Flores

Game Developer | Gameplay & 3C | Unity & C# | Unreal Engine | Functional QA

Rosario, Santa Fe, Argentina | 0341 322-3196 | migue.angelko@gmail.com | LinkedIn | Portfolio

PROFESSIONAL PROFILE

Game developer with around one year of practical experience in academic, personal and collaborative projects. I develop gameplay and 3C systems in Unity and C#, including jumping, dashing, camera following and collision responses. I currently work on Bossaball through a UTN internship, developing gameplay and online prototypes with Netcode for GameObjects. I also use Unreal Engine Blueprints and Data Tables, and complement development with functional QA and bug documentation. I am in the final stage of a university technical degree in Video Game Development and Production. English: C2.

CORE SKILLS

Programming and engines

- C# & 3C: gameplay, character movement and camera behaviour.
- Unity: 2D/3D prototypes, Netcode for GameObjects and networked gameplay synchronisation.
- Unreal Engine: Blueprints, Data Tables and visual logic.
- Additional knowledge: fundamentals of Node.js, Java and SQL.
- Methodology: Scrum fundamentals, task organisation and iterative work.

Functional QA

- Manual and functional testing of video games.
- Bug reports with reproduction steps, expected results and evidence.
- Validation of mechanics, progression, balance and collisions.

DEVELOPMENT EXPERIENCE

Game Programmer | Bossaball

5 September 2026 - present | Expected completion: 28 November 2026

UTN internship. Unity and C# development in collaboration with the assigned team.

- Working on character jumps and dashes, camera following and collision responses in Unity/C#.
- Implementing and adjusting physics behaviours, including network synchronisation for players and physics objects.
- Developing online multiplayer prototypes with Netcode for GameObjects (NGO) and gameplay synchronisation.
- Developing and integrating gameplay systems, player interaction and progression.

PROJECTS

Piratas Materos | Unity gameplay demos

- Developed jumping-platform demos with collision handling and interactions with damage-dealing objects.

Bubble Defender | Game Designer & Developer | Global Game Jam 2025

- Implemented aiming, enemy damage and victory logic; co-developed the Unity tower-defense prototype in 32 hours.

Published portfolio | miguethelito.github.io | konamigue.itch.io

Prototypes and games published on itch.io, including Typing Crawler, Operación Sigilo and Calamarino. Development of mechanics and interactive systems, alongside functional testing.

- Configuring objectives, rewards, damage, states and reset conditions.
- Integrating events through collisions, triggers and contact detection.
- Designing obstacles, enemies and interactive elements; adjusting difficulty through configurable parameters and data.
- Functional testing of level flow, mechanics, balance and stability.
- Participation in game jams in 2024 and 2025.

EDUCATION AND CERTIFICATIONS

Centro de e-Learning UTN FRBA | 2025 - 2026

University Technical Degree in Video Game Development and Production. Final stage in progress. Expected completion: December 2026.

Training in Unity, C#, Unreal Engine, functional testing and video game production.

EF SET English Certificate 76/100 - C2 Proficient

EF SET | March 2023

Scrum Foundation Professional Certificate (SFPC)

Agile Funding | June 2020

Languages

Native Spanish | English C2 certified by EF SET.

Available for remote work from Argentina and on-site or hybrid opportunities in Rosario. Interested in gameplay, 3C systems, multiplayer prototypes and functional QA.

ADDITIONAL SKILLS

- Technical problem analysis and attention to detail.
- Team collaboration, continuous learning and product iteration.
